

Genomic Instability and DNA Repair

April 2–6, 2017 | Santa Fe Community Convention Center | Santa Fe, New Mexico | USA

Scientific Organizers:

Julia Promisel Cooper, National Cancer Institute, National Institutes of Health, USA

Marco F. Foiani, Istituto FIRC di Oncologia Molecolare, Italy

Geneviève Almouzni, Centre National de la Recherche Scientifique, France

Joint with the meeting on *DNA Replication and Recombination*

Genome stability is the foundation upon which all cellular and organismal processes depend. This conference will grapple with the intricate array of biochemical reactions orchestrated by the cell to replicate, repair and segregate chromosomes accurately despite constant threats from spontaneous and environmentally-induced damage. Defects in these reactions lead to genomic instability, a confirmed driver of cancer and degenerative diseases. Fascinating and therapeutically crucial questions remain about the mechanisms underlying chromosome stability, and cross-disciplinary approaches are required to address them. How do epigenetic chromatin marks influence repair of underlying DNA sequences, and how can we predict the effects of chemotherapeutic agents that alter such marks? To what extent is the nucleus organized into subdomains with distinct functions; how are these subdomains altered when cells move or differentiate? How are the myriad helicases, nucleases and polymerases coordinated to safeguard genome stability, why are these molecules often mutated in human disease, and how can we ameliorate the effects of such mutations? What is the array of strategies available to cancer cells as they achieve unlimited proliferation? This conference has a history of bringing together investigators from diverse subfields who otherwise rarely meet. Cutting-edge concepts in translational, genomic, cellular, molecular, RNA and structural biology will be dissected to take the conversation to unprecedented levels of depth and breadth. The concurrent conference on “DNA Replication and Recombination” will provide additional opportunities for cross-talk. Both conferences are committed to nurturing interactions among longtime experts in the field with students, postdocs and investigators new to the field.

Session Topics:

- Mechanisms of DNA Repair
- RNA Metabolism and Genome Stability
- Interplay between Chromatin Structure and DNA Replication/Repair (Joint)
- Cell Cycle Regulation of DNA Damage Response
- Nuclear Dynamics and Genome Stability
- DNA Repair and Human Diseases
- Replication Fork Establishment and Replication Coupled Repair (Joint)
- Telomeres and Centromeres

Scholarship Application & Discounted Abstract Deadline: December 5, 2016

Abstract Deadline: January 12, 2017

Discounted Registration Deadline: February 2, 2017

Note: Scholarships are available for graduate students and postdoctoral fellows and are awarded based on the abstract submitted.

KEYSTONE SYMPOSIA

on Molecular and Cellular Biology

Genomic Instability and DNA Repair (Z1)

Scientific Organizers: Julia Promisel Cooper, Marco F. Foiani and Geneviève Almouzni

Sponsored by AstraZeneca, Bayer HealthCare Pharmaceuticals, Editas Medicine, Inc., EMD Serono Research and Development Institute, Inc., Journal of Molecular Cell Biology (JMCB) and TESARO, Inc.

DNA Replication and Recombination (Z2)

Scientific Organizers: John F.X. Diffley, Anja Groth and Scott Keeney

April 2-6, 2017 • Santa Fe Community Convention Center • Santa Fe, New Mexico, USA

Sponsored by Editas Medicine, Inc.

Abstract & Scholarship Deadline: December 5, 2016 / Abstract Deadline: January 12, 2017 / Discounted Registration Deadline: February 2, 2017

SUNDAY, APRIL 2

Arrival and Registration

MONDAY, APRIL 3

Welcome and Keynote Session (Joint)

- ***Julia Promisel Cooper**, NCI, National Institutes of Health, USA
- ***Scott Keeney**, HHMI/Memorial Sloan Kettering Cancer Center, USA
- Tatsuya Hirano**, RIKEN, Japan
Condensin-Based Chromosome Organization
- Johannes C. Walter**, Harvard Medical School, USA
Mechanisms of Replication-Coupled Repair

Mechanisms of DNA Repair (Z1)

- ***Timothy C. Humphrey**, University of Oxford, UK
- Wei Yang**, NIDDK, National Institutes of Health, USA
Structural Insights into Translesion DNA Polymerases
- James E. Haber**, Brandeis University, USA
Short Talk: Rad51-Mediated Double-Strand Break Repair and Mismatch Correction of Highly Diverged Substrates
- Joseph J. Loparo**, Harvard Medical School, USA
Short Talk: Single-Molecule Imaging of Non-Homologous End Joining
- Michael D. Stone**, University of California, Santa Cruz, USA
Mechanical Transitions in Long Duplex Telomere DNA Molecules
- Fena Ochs**, University of Copenhagen, Denmark
Short Talk: Dynamic Chromatin Superstructures Safeguard Integrity of Nuclear Compartments Challenged by DNA Breakage

Replication/Repair Structure and Function (Z2)

- ***John F.X. Diffley**, Francis Crick Institute, UK
- Michael E. O'Donnell**, Rockefeller University, USA
Structure and Function of the Eukaryotic Replisome
- Tyler H. Stanage**, University of Wisconsin-Madison, USA
Short Talk: The Escherichia coli RarA Protein is Involved in the Switch between DNA Replication and Translesion Synthesis in vivo
- Karlene A. Cimprich**, Stanford University, USA
When RNA Meets DNA: Dangerous Liaisons in the Genome
- Alessandro Costa**, Francis Crick Institute, UK
Cryo-EM Approaches to Understanding the Eukaryotic Replisome
- Matthew L. Bochman**, Indiana University, USA
Short Talk: Hrq1, The Yeast Homolog of RecQ4, Inhibits Telomerase Activity on Long Telomeres

Workshop 1: Genome Instability and DNA Repair I (Z1)

- ***James E. Haber**, Brandeis University, USA

Elena Balkanska-Sinclair, Duke University, USA
The BRD4-NUT Fusion Protein from Nut-Midline Carcinoma modulates DNA Damage Signaling and Ionizing Radiation Response

Michael M. Cox, University of Wisconsin-Madison, USA
Ionizing Radiation Resistance in Experimentally Evolved Escherichia coli Populations
