

DNA Replication and Recombination

April 2–6, 2017 | Santa Fe Community Convention Center | Santa Fe, New Mexico | USA

Scientific Organizers:

John F.X. Diffley, Cancer Research UK, London Research Institute, UK

Anja Groth, University of Copenhagen, Denmark

Scott Keeney, HHMI, Memorial Sloan-Kettering Cancer Center, USA

Joint with the meeting on **Genomic Instability and DNA Repair**

DNA replication and recombination are common to all cells. Errors in these processes lead to many diseases in humans, including cancer, and many fundamental questions are still unresolved. Due to recent technical advances in microscopy and other techniques, these dynamic processes can now be studied in time and space in both prokaryotes and eukaryotes. Moreover, breakthroughs in the biochemical reconstitution of processes in DNA replication and recombination repair as well as single particle electron microscopy promise to reveal new mechanisms at near-atomic resolution; and new DNA sequencing technologies make it possible to study these key processes in great detail. Mechanistic similarities across the three domains of life provide new basic principles while differences identify potential targets for therapeutic intervention. The Keystone Symposia “DNA Replication and Recombination” meeting has historically been one of the premiere meetings in this field and one of the very few that brings together scientists working in replication and recombination across all life forms. Because of the close relationship between DNA replication and recombination and their importance for genome stability, this meeting will be held jointly with the Keystone Symposia meeting on “Genomic Instability and DNA Repair.” Talks at the “DNA Replication and Recombination” meeting will focus on the mechanism and regulation of these processes, with an emphasis on multiple organisms and multiple approaches. Talks in joint sessions will center on the metabolism of stalled replication forks and the importance of chromatin in replication, recombination and genome stability.

Session Topics:

- Replication/Repair Structure and Function
- Starting Recombination
- Interplay between Chromatin Structure and DNA Replication/Repair (Joint)
- Regulating Recombination
- Replication Fork Progression and Restart
- Replication Initiation Mechanisms
- Replication Fork Establishment and Replication Coupled Repair (Joint)
- Finishing Recombination

Scholarship Application & Discounted Abstract Deadline: December 5, 2016

Abstract Deadline: January 12, 2017

Discounted Registration Deadline: February 2, 2017

Note: Scholarships are available for graduate students and postdoctoral fellows and are awarded based on the abstract submitted.

KEYSTONE SYMPOSIA

on Molecular and Cellular Biology

DNA Replication and Recombination (Z2)

Scientific Organizers: John F.X. Diffley, Anja Groth and Scott Keeney

Sponsored by Editas Medicine, Inc.

Genomic Instability and DNA Repair (Z1)

Scientific Organizers: Julia Promisel Cooper, Marco F. Foiani and Geneviève Almouzni

April 2-6, 2017 • Santa Fe Community Convention Center • Santa Fe, New Mexico, USA

Sponsored by AstraZeneca, Bayer HealthCare Pharmaceuticals, Editas Medicine, Inc., EMD Serono Research and Development Institute, Inc., Journal of Molecular Cell Biology (JMCB) and TESARO, Inc.

Abstract & Scholarship Deadline: December 5, 2016 / Abstract Deadline: January 12, 2017 / Discounted Registration Deadline: February 2, 2017

SUNDAY, APRIL 2

Arrival and Registration

MONDAY, APRIL 3

Welcome and Keynote Session (Joint)

***Julia Promisel Cooper**, NCI, National Institutes of Health, USA

***Scott Keeney**, HHMI/Memorial Sloan Kettering Cancer Center, USA

Tatsuya Hirano, RIKEN, Japan

Condensin-Based Chromosome Organization

Johannes C. Walter, Harvard Medical School, USA

Mechanisms of Replication-Coupled Repair

Replication/Repair Structure and Function (Z2)

***John F.X. Diffley**, Francis Crick Institute, UK

Michael E. O'Donnell, Rockefeller University, USA

Structure and Function of the Eukaryotic Replisome

Tyler H. Stanage, University of Wisconsin-Madison, USA

Short Talk: The Escherichia coli RarA Protein is Involved in the Switch between DNA Replication and Translesion Synthesis in vivo

Karlene A. Cimprich, USA

When RNA Meets DNA: Dangerous Liaisons in the Genome

Alessandro Costa, Francis Crick Institute, UK

Cryo-EM Approaches to Understanding the Eukaryotic Replisome

Matthew L. Bochman, Indiana University, USA

Short Talk: Hrq1, The Yeast Homolog of RecQ4, Inhibits Telomerase Activity on Long Telomeres

Mechanisms of DNA Repair (Z1)

***Timothy C. Humphrey**, University of Oxford, UK

Wei Yang, NIDDK, National Institutes of Health, USA

Structural Insights into Translesion DNA Polymerases

James E. Haber, Brandeis University, USA

Short Talk: Rad51-Mediated Double-Strand Break Repair and Mismatch Correction of Highly Diverged Substrates

Joseph J. Loparo, Harvard Medical School, USA

Short Talk: Single-Molecule Imaging of Non-Homologous End Joining

Michael D. Stone, University of California, Santa Cruz, USA

Mechanical Transitions in Long Duplex Telomere DNA Molecules

Fena Ochs, University of Copenhagen, Denmark

Short Talk: Dynamic Chromatin Superstructures Safeguard Integrity of Nuclear Compartments Challenged by DNA Breakage

Workshop 1: Recombination and Repair (Z2)

Tracey E. Beyer, Biotech Research and Innovation Centre, Denmark
Ontogeny of Genome Rearrangements in Budding Yeast

***Simon N. Powell**, Memorial Sloan Kettering Cancer Center, USA
Replication Fork Cleavage Occurs within 100bp from Local ATM Signaling of Site-Specific DNA Replication Block in Human Cells
